

Born to be wild

saving the world's rarest bird

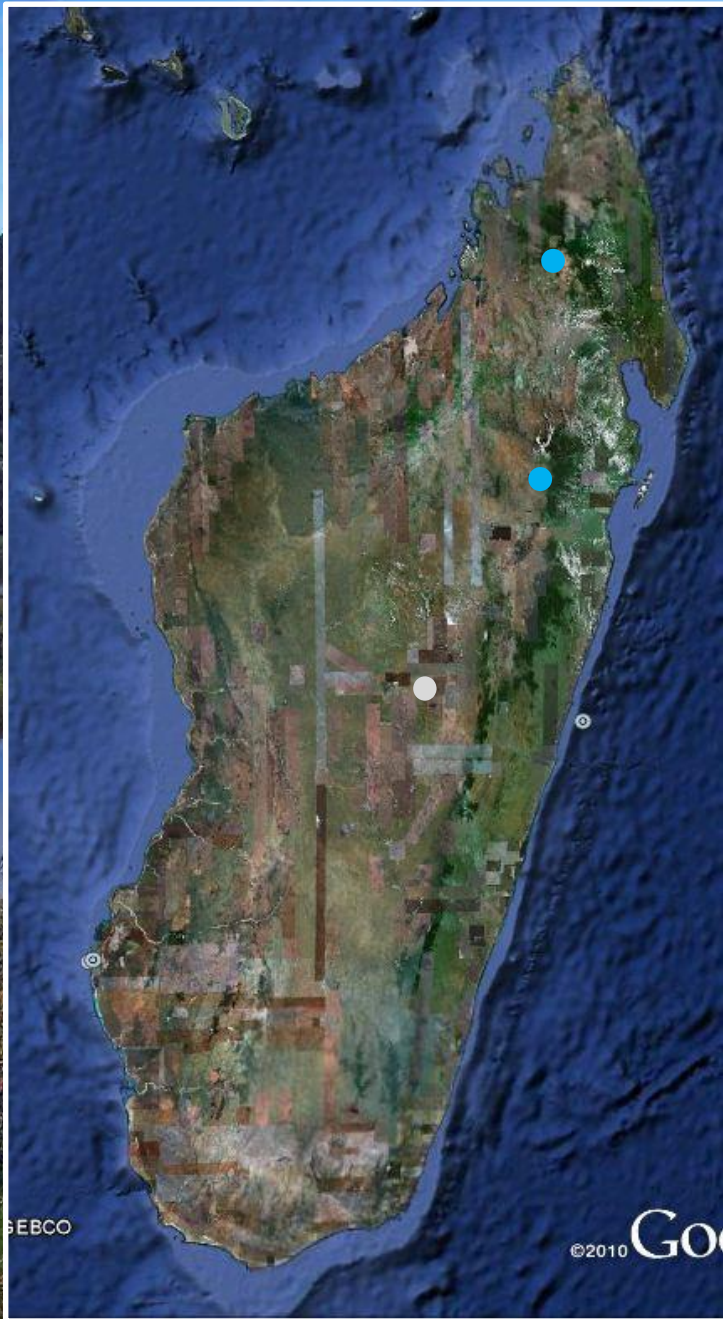

unique Madagascar

anthropogenically challenged

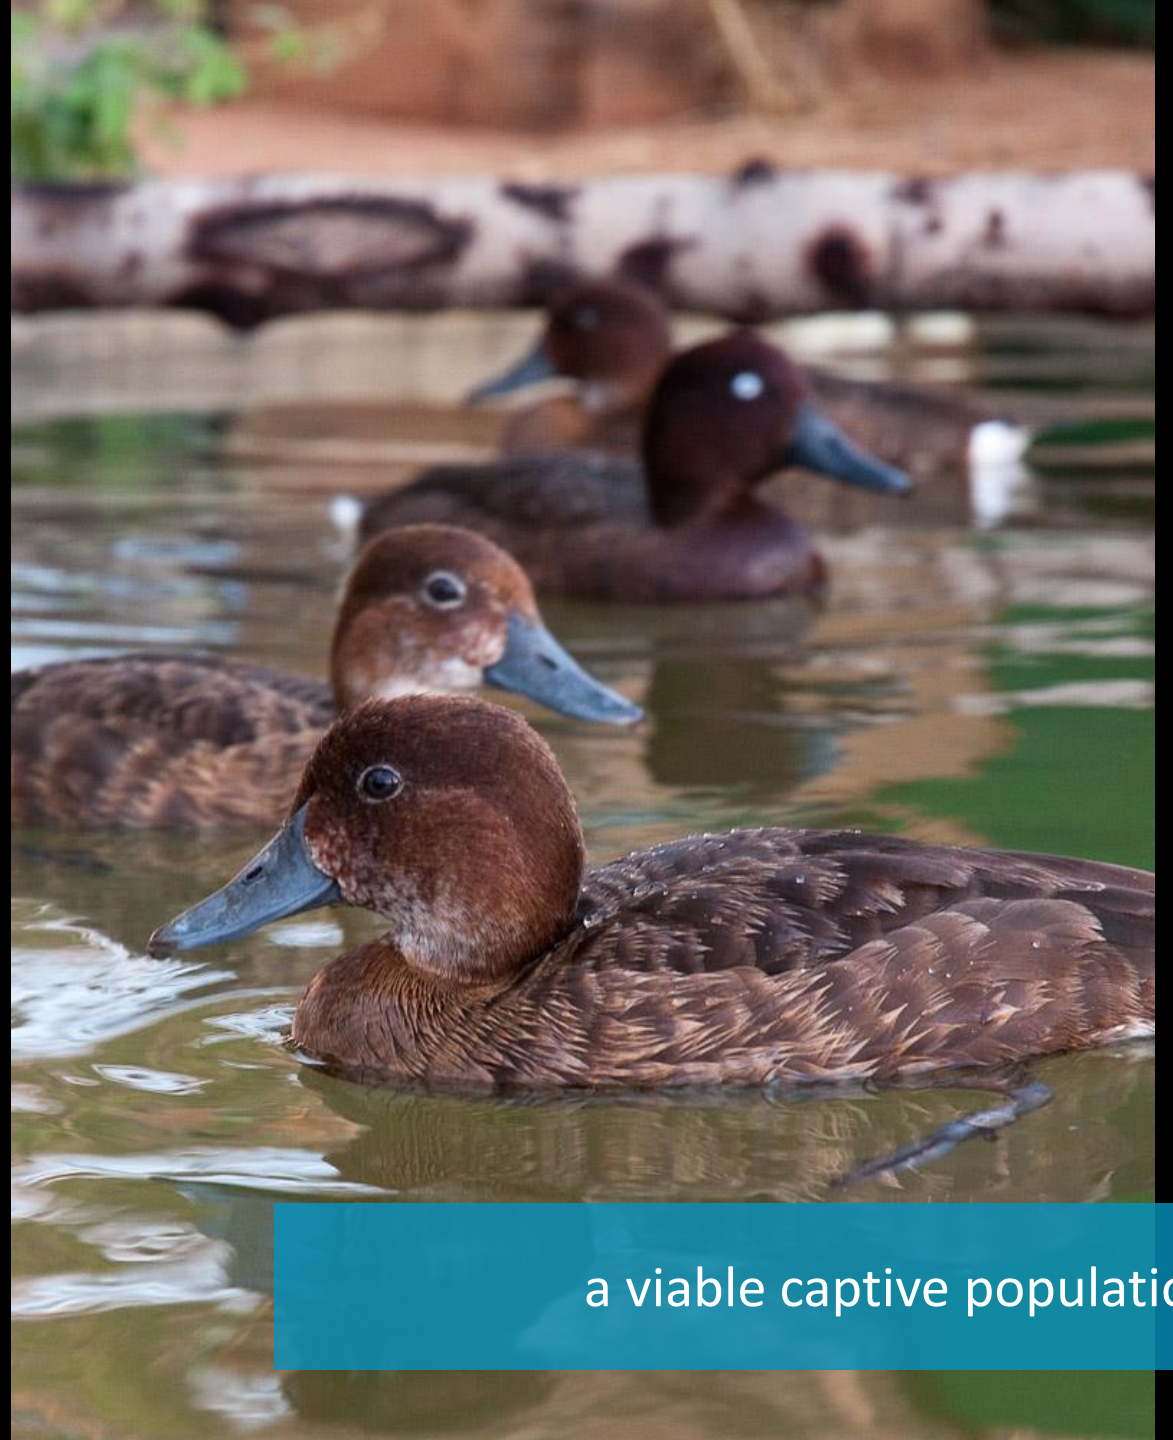

teetering on the brink

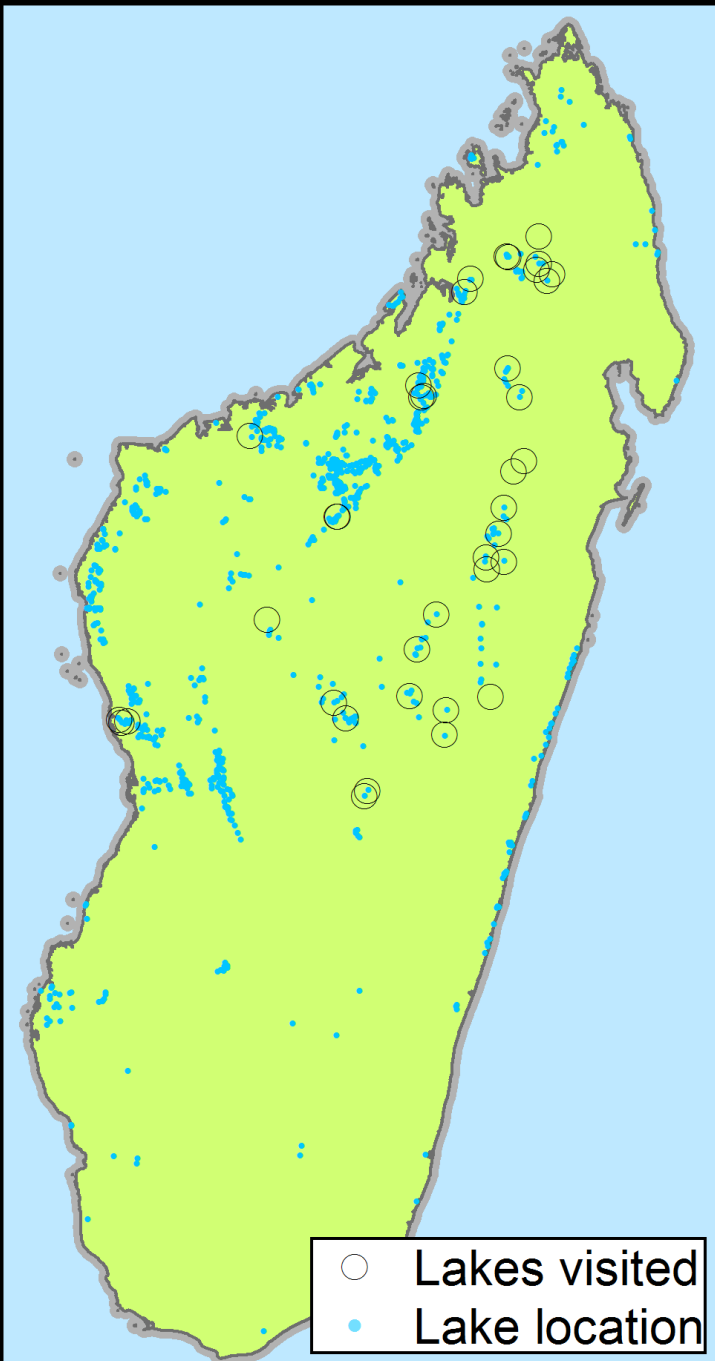

rescue mission

a permanent home

a viable captive population

finding a new home

this place is terrible, but still ...

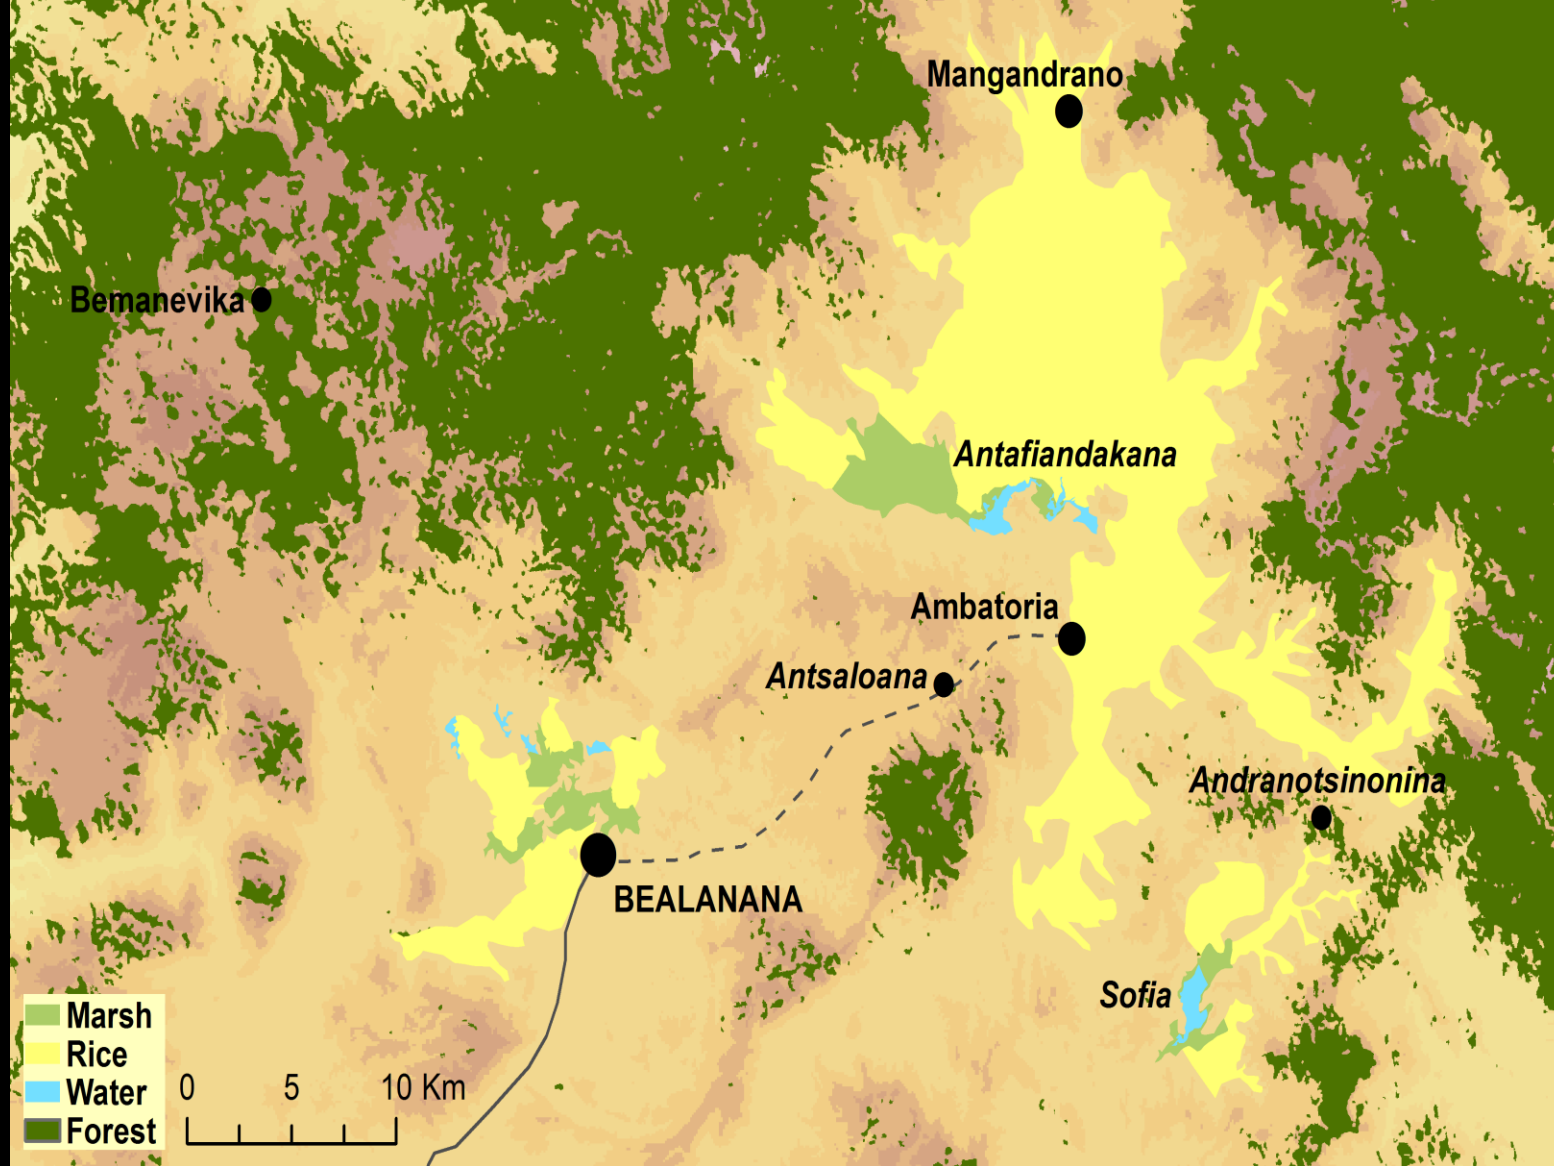

putting ducks on a duff lake

bring on 2018

challenge 1 – getting there

Challenge 2 – getting the kit there

challenge 3 – making these there

the road can be tricky

if, indeed, there is a road

'normal' travel

Plan B gets you a bit further

Plan C *has* to get further

Plan D

... and we have this

challenge 4 – get the ducks there

step 1 – building the Floating Aviaries

a lot of this

really, the last one

a little sloppy

heavy machinery rural style

unusual absences

flat-pack aviaries

specialist welders

do *not* get this wrong

where there's a will

the return leg

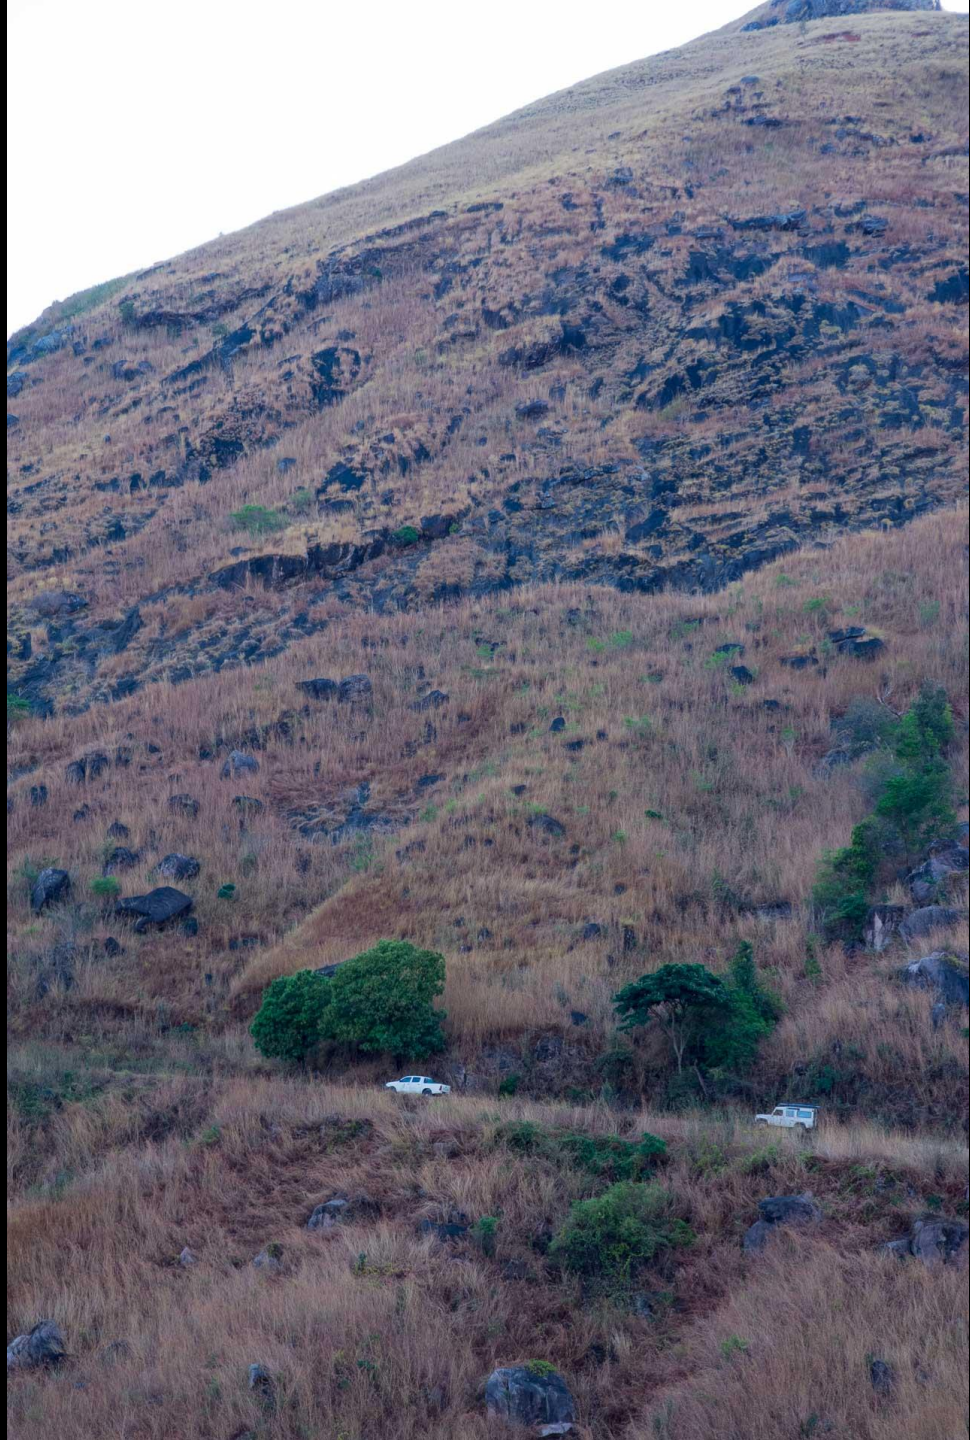

time for apologies

the clock is ticking

we no longer own the timetable

not a minute too early

assembly time - 36 hours

feathered fingers

don't count your ducks

still a race against time

at least it's the dry season

evening entertainment

growing up

round 1 complete

into the unknown

this is supposed to be the easy bit

OVERLOADING THIS BOX MAY CREATE A
HEALTH AND SAFETY HAZARD
BOX WEIGHT MUST NOT EXCEED 15Kgs

WARNING!
LIFTING MUST ALWAYS BE DONE
CORRECTLY TO AVOID INJURY

carefully, very carefully

this does not bode well

none the worse

gluttons for punishment

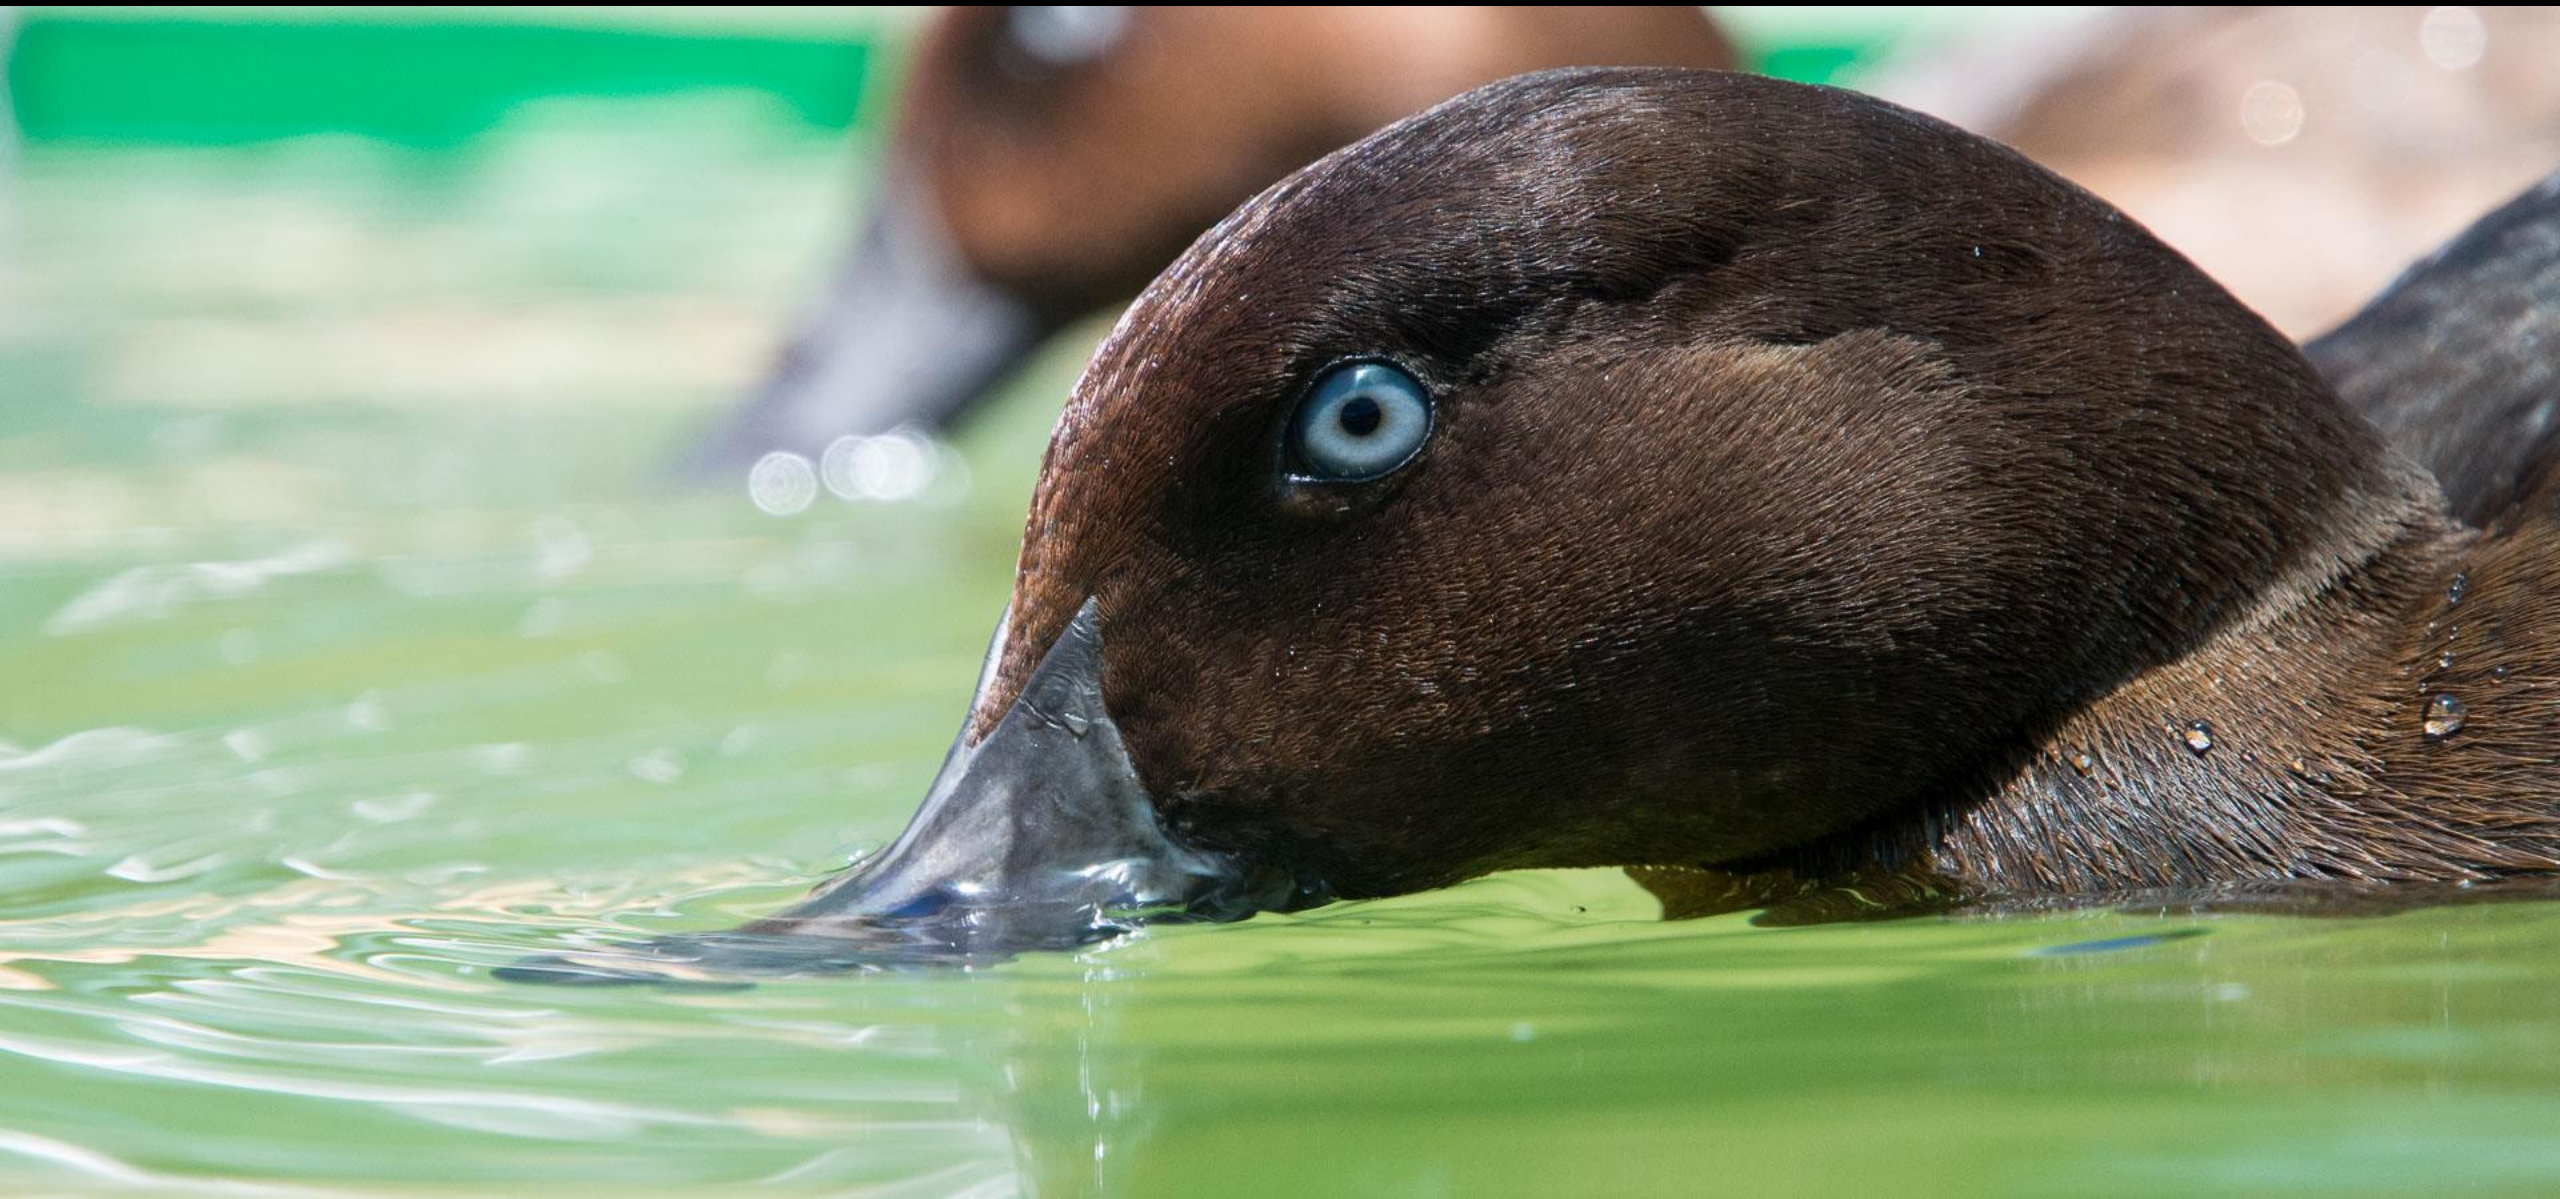

chaos still reigns

feather perfect

still far from ready

don't let up

this wasn't on the job description

ready

the training has to work

their final move

watching and waiting

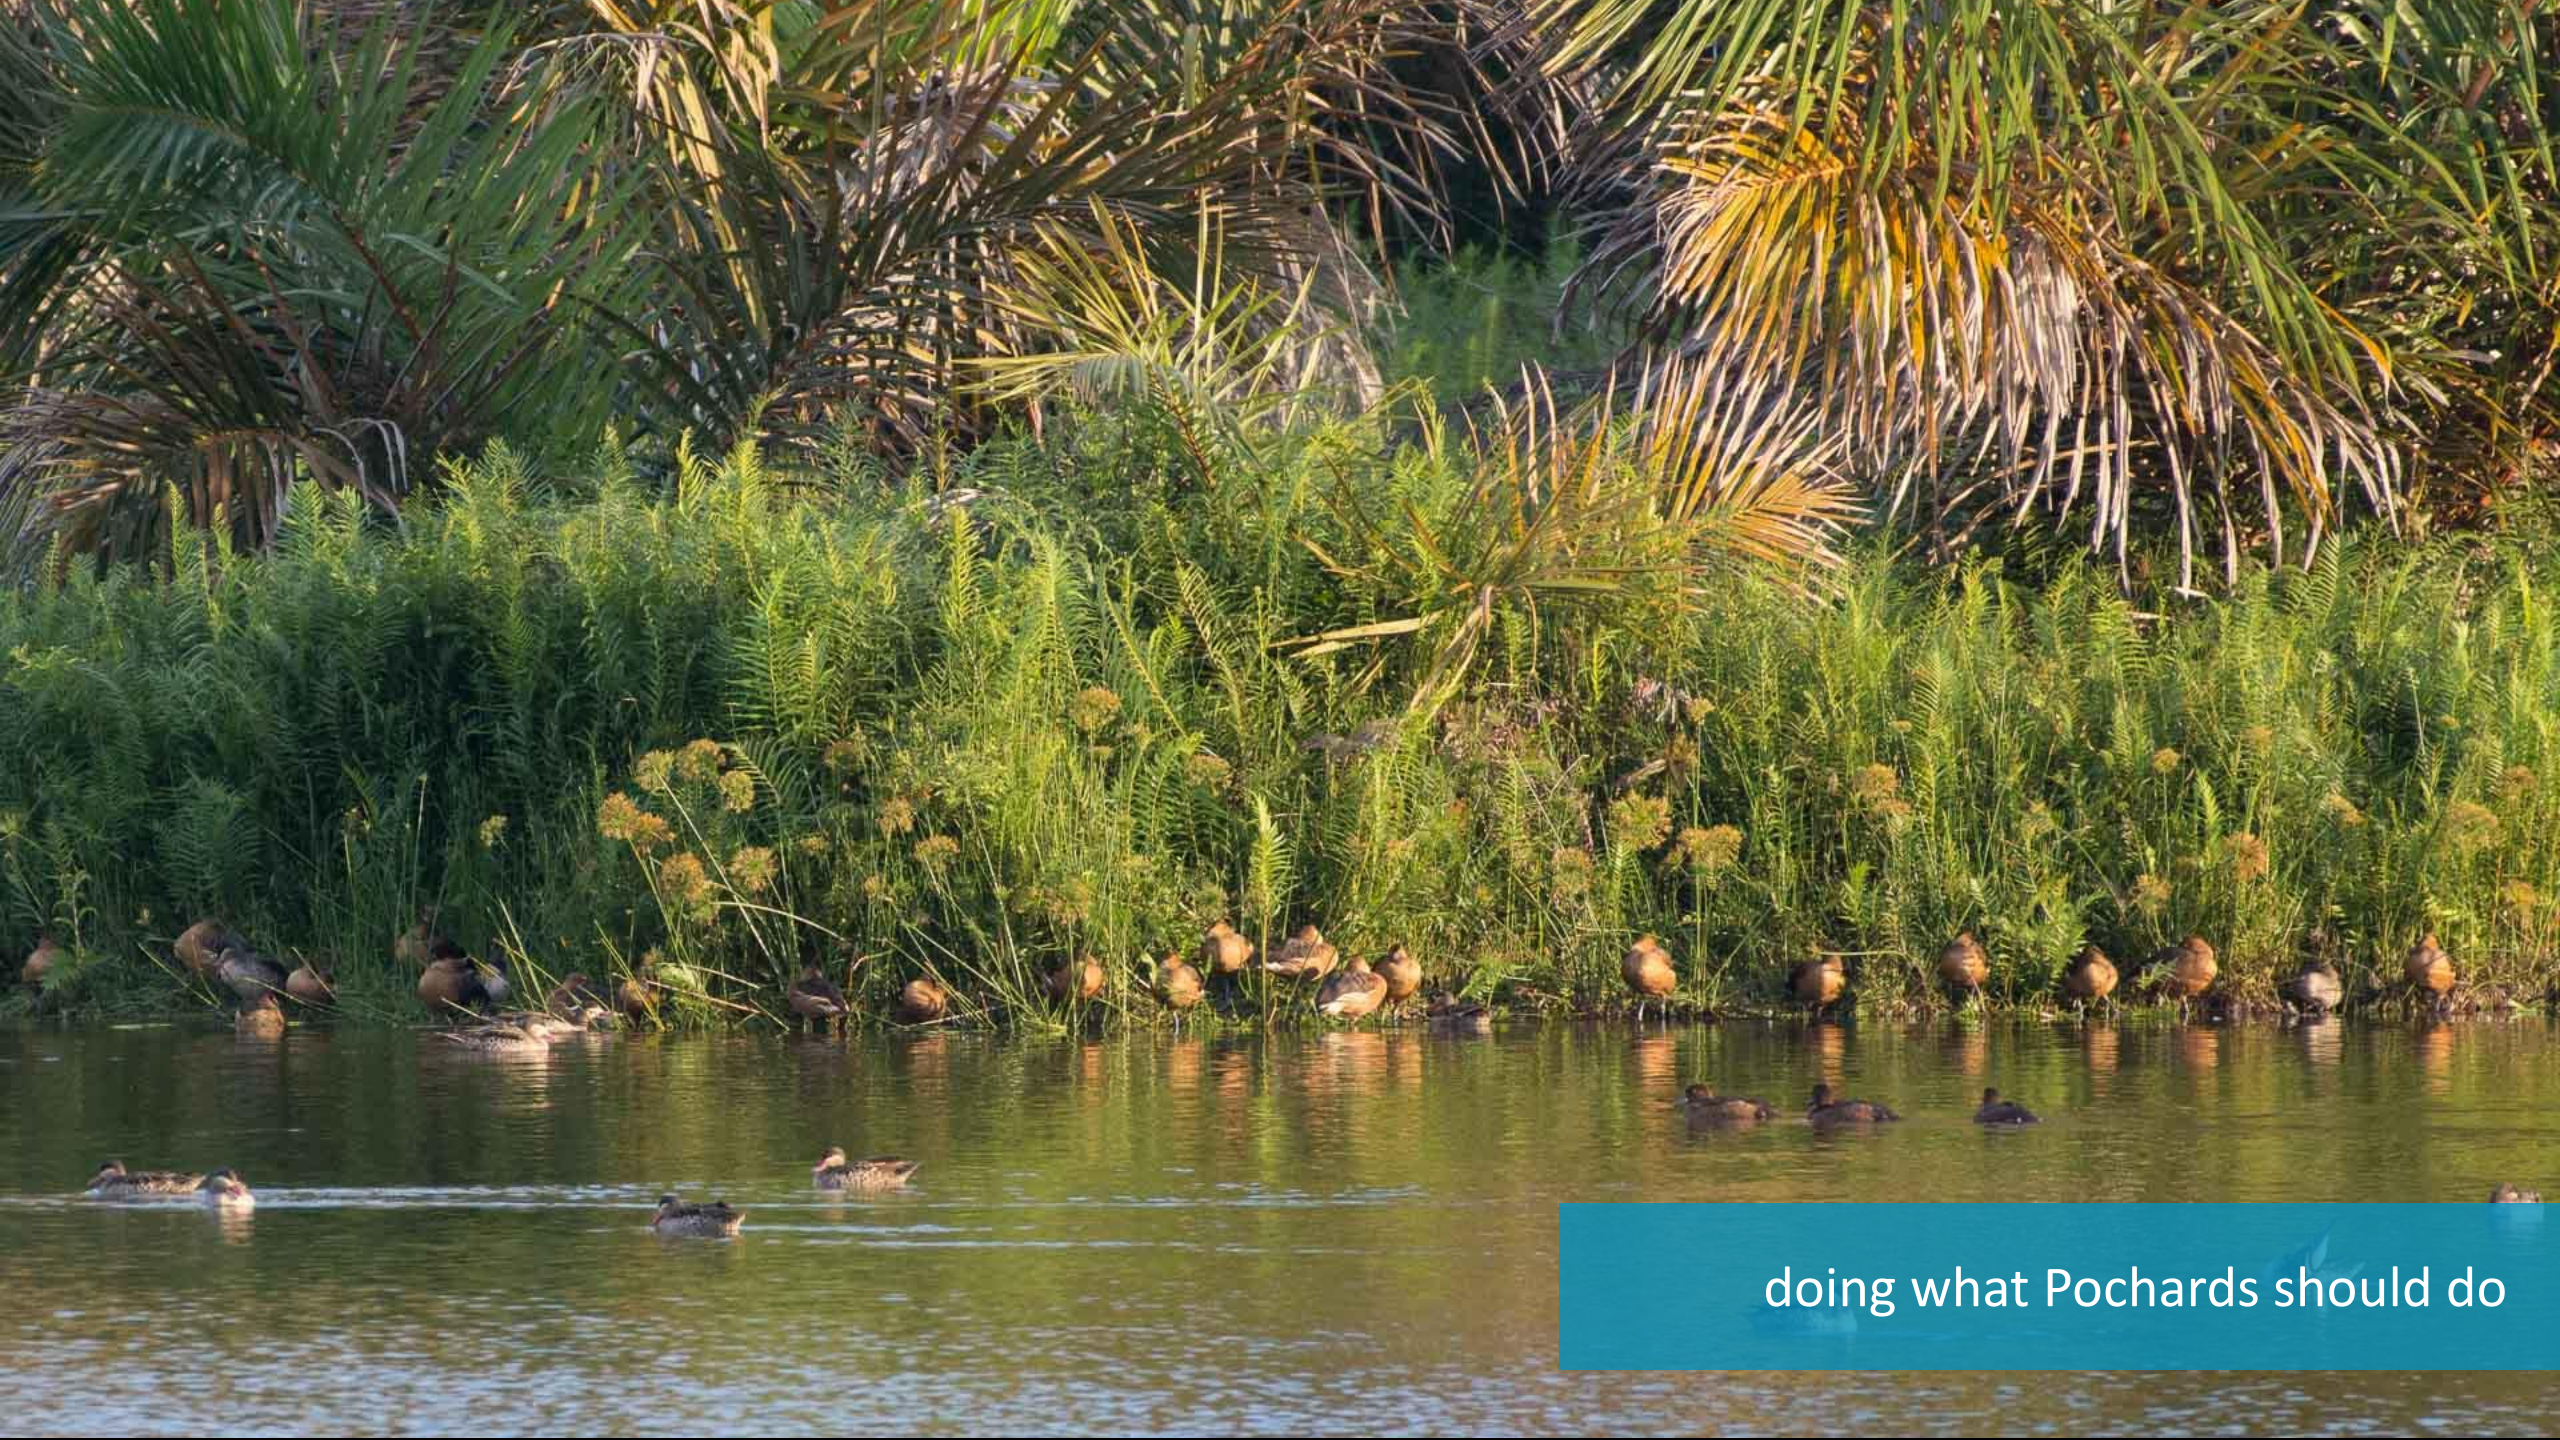

the big day

the real test

doing what Pochards should do

so far, so good

only half the story

there is no supermarket

there is no plan B

an engaging narrative
